

NOIL Accessories and Mounting Options

Accessories:

Post Filter: The post filter provides a fourth stage of filtration which increases efficiency to 99.9% @ 0.3 micron. The post filter can be added to the Noil Mist Collector at any time. For heavy smoke the Post Filter Kit can be substituted with a **HEPA Filter Kit**.

Installation Accessories: Butterfly valves, flange to hose, intake & recovery hoses and clamps are available in a variety of sizes and will be found detailed in your personalized quotation.

Mounting Options:

There are various mounting options for Coral Noil Mist Collectors.

Machine Mount: All Noil models can be mounted directly to the machine tool. Because the Noil is specially designed, the mist collectors are vibration-free and when properly mounted will not interfere with the machining of precision parts.

Floor Stand: A floor mounting column stand is available and measures 6'6" in height. The column stand should be secured to the floor.

Wall Mount: Wall mounting brackets are available for all Noil models.

Ceiling Suspension: All Noil models can be suspended from the ceiling.
